Module: `biztech_report_template` **Version:** 20.0.0.0 (Odoo 20) **Author:** AppJetty

1. Introduction

Clever Multiple Invoice Template replaces Odoo's standard invoice PDF with six designed layouts, and adds detailed control over how that invoice looks — colours, logo, watermark, font and font size, product images, signature, footer style and amount in words.

The six styles are **Bold**, **Classic**, **Corporate**, **Morden**, **Polished** and **Vintage**. Each is registered as a real `ir.actions.report`, so it appears in Odoo's own **Print** menu on the invoice.

This module focuses on invoices (`account.move`). If you also need styled quotations, sales orders, purchase orders, delivery notes and picking lists, see the companion module **Clever All In One Report Templates** (`general_template`).

2. Key features

- Six invoice template styles.
- Colour control for headings, background, company and customer names, addresses, and alternating table rows.
- Dedicated report logo and footer logo, independent of the company logo.
- Watermark as logo, free text, or document status — with its own text colour and font size.
- Choice of report font **and font size in pixels**.
- Optional product image column on invoice lines.
- Optional signature image block.
- Optional amount in words.
- Standard or multi-column footer.
- Append a fixed PDF (terms, certificates) to every printed invoice.
- Defaults at company level, overridable per customer and per invoice.

3. Prerequisites

- Odoo 20.0 with **Invoicing/Accounting**, **Sales**, **Purchase** and **Inventory** installed. The module declares: `account`, `sale_management`, `purchase`, `barcodes`, `sale_stock`.
- An administrator account.
- Python packages — install from the repository root:

```
python3.12 -m pip install --user -r requirements.txt
```

4. Installation

1. Copy the `biztech_report_template` folder into a directory on your `addons_path`.
2. Install the Python packages (section 3).
3. Restart the Odoo service — required for new module code to load.
4. Enable developer mode: **Settings → General Settings → Developer Tools → Activate the developer mode**.

5. **Apps → Update Apps List → Update**.
6. Search for **Clever Multiple Invoice Template** and click **Install**.

5. How a template is chosen

The template used when printing an invoice is resolved in three levels, most specific first:

```
Invoice
   ↓  falls back to
Customer (contact record)
   ↓  falls back to
Company default
```

Set the company default once, override it for customers who need a different look, and override again on a single invoice when required.

6. Company configuration

Go to **Settings → Users & Companies → Companies**, open your company, and select the **Invoice Report Settings** tab.

6.1 Default Template Settings

Field	Purpose
Invoice Template	The style used for invoices by default.

6.2 Template Configuration

Field	Purpose
Report Logo	Logo printed on invoices, separate from the company logo. Required.
Standard Template Configuration	Picks a style and applies its colour preset to every colour field below in one step.

Watermark

Field	Purpose
Display Watermark?	Enables the watermark.
Watermark	`Text`, `Status` (prints the invoice state) or `Logo`.
Watermark Text	Used when *Text* is selected.
Watermark Text Color	Colour of the watermark text.
Watermark Text Font Size	Size of the watermark text.
Report Watermark Logo	Used when *Logo* is selected.

Colours — all accept a hex value and use a colour picker.

Field	Applies to
Template Base Color	Table headings and accent blocks.
Template Text Color	Text printed on the base colour.
Background Color	Page background.
General Text Color	Body text.
Company Name Color	Your company name.
Company Address Color	Your company address block.
Customer Name Color	Customer name.
Customer Address Color	Customer address block.
Table Odd Parity Color	Odd table rows.
Table Even Parity Color	Even table rows.

Display options

Field	Effect
Display Company Name in Bold	Bold company name.
Display Customer Name in Bold	Bold customer name.
Display Product Description	Prints the description under each line. On by default.
Display Product Image	Adds a product image column to the invoice lines.
Display Payment Notes	Prints payment notes.
Display Payment Description	Prints the payment terms description.
Amount In Words	Prints the invoice total in words.

Report Font

Field	Effect
Report Font	Font used in the invoice.
Report Font Size(px)	Base font size, default `12`.
(reload fonts)	Scans the server for installed fonts and adds them to the list. Reload the page afterwards.

Report Footer

Field	Effect
Report Footer Selection	`Standard` or `Multi Columns Footer`.
Report Footer Logo	Logo shown in the footer.

Signature

Field	Effect
Display Signature	Adds a signature block at the end of the invoice.
Signature	The signature image to print.

> **Tip:** set **Standard Template Configuration** first. It overwrites every colour field with that style's preset, so manual colour tweaks made beforehand will be lost.

7. Customer defaults

Open a contact (**Contacts**) and set **Invoice Template** on the template settings page added by the module.

Leave it empty to use the company default. Use this for customers who need branded or simplified paperwork.

8. Per-invoice override

Open an invoice (**Invoicing → Customers → Invoices**). The module adds an **Invoice Report Template** field to the invoice form, near the invoice date.

Set it to print this one invoice in a different style. Leave it empty to inherit from the customer, then the company.

9. Report extra content

This appends a fixed PDF to the end of every printed invoice — useful for terms and conditions, certificates or legal notices.

Open **Settings → Users & Companies → Companies → Invoice Report Settings → Report Extra Content**, then create a record:

Field	Notes
Report Type	Invoice (`account.move`) — the only model this module supports.
Company	The company the rule applies to.
File name	Name of the uploaded file, including its extension.
Append Extra Content	The file itself.

One record per model per company — this pair is enforced as unique.

Accepted file types. PDFs are appended as-is. Plain text (`.txt`, `.text`) and images (`.jpg`, `.jpeg`, `.png`) are converted to PDF automatically on upload. Any other extension is rejected with a validation error.

10. Printing

Open an invoice and use the **Print** menu. Each style appears by name — *Bold*, *Classic*, *Corporate*, *Morden*, *Polished*, *Vintage* — because each is registered as a separate Odoo report.

Selecting a style from the Print menu prints that style once. To change the style used by default, set it on the invoice, the customer, or the company as described above.
