Module: `general_template` **Version:** 20.0.0.0 (Odoo 20) **Author:** AppJetty

1. Introduction

Clever All In One Report Templates replaces Odoo's standard business documents with six designed templates, available across six document types:

Document type	Odoo model
Quotation	`sale.order`
Sales Order	`sale.order`
Purchase Order	`purchase.order`
Request for Quotation	`purchase.order`
Delivery Note	`stock.picking`
Picking List	`stock.picking`
Invoice	`account.move`

The six styles are **Bold**, **Classic**, **Corporate**, **Morden**, **Polished** and **Vintage**. Each is a real `ir.actions.report` record, so it appears in Odoo's own **Print** menu alongside the standard reports.

On top of the layout choice, almost every visual element is configurable: colours, logo, watermark, font, footer style, signature block, barcode, and whether product descriptions and notes are printed.

2. Key features

- Six template styles across seven document types.
- Colour control for headings, company name, customer name, addresses and alternating table rows.
- Separate report logo, independent of the company logo.
- Watermark as a logo, free text, or the document status.
- Choice of report font, with a system font discovery tool.
- Standard or multi-column footer.
- Optional signature block, barcode, notes and payment information.
- Amount in words on quotations, orders, purchase orders and invoices.
- Append a fixed PDF (terms, certificates) to every printed document.
- Template defaults at company level, overridable per partner and per document.

3. Prerequisites

- Odoo 20.0 with **Invoicing/Accounting**, **Sales**, **Purchase**, **Inventory** and **Delivery** installed. The module declares: `account`, `sale_management`, `delivery`, `stock`, `purchase`, `partner_autocomplete`, `stock_delivery`.

- An administrator account.
- Python packages — install from the repository root:

```
python3.12 -m pip install --user -r requirements.txt
```

4. Installation

1. Copy the `general_template` folder into a directory on your `addons_path`.
2. Install the Python packages (section 3).
3. Restart the Odoo service — required for new module code to load.
4. Enable developer mode: **Settings → General Settings → Developer Tools → Activate the developer mode**.
5. **Apps → Update Apps List → Update**.
6. Search for **Clever All In One Report Templates** and click **Install**.

5. How a template is chosen

The template applied to a printed document is resolved in three levels, most specific first:

```
Document (Sales Order / Invoice / PO / Transfer)
    ↓  falls back to
Customer or Vendor (contact record)
    ↓  falls back to
Company default
```

Set the company default once, override it for particular customers who need a different look, and override again on an individual document when required.

6. Company configuration

Go to **Settings → Users & Companies → Companies**, open your company, and select the **Default Report Settings** tab.

6.1 Default Template Settings

Choose the template used for each document type:

- **Quotation/Order Template** — sales orders and quotations
- **Purchase Order Template**
- **RFQ Template**
- **Invoice Template**
- **Delivery Note Template**
- **Picking List Template**

Each dropdown lists the six styles for that document type. A **Report Extra Content** button also sits in this section — see section 9.

6.2 Default Report Settings

Field	Purpose
Report Logo	Logo printed on reports, separate from the company logo. Required.
Standard Template Configuration	Picks a style and applies its colour preset to all the colour fields below in one step.

Watermark

Field	Purpose
Display Watermark?	Enables the watermark.
Watermark	`Logo`, `Text`, or `Status` (prints the document state).
Watermark Text	Used when *Text* is selected.
Report Watermark Logo	Used when *Logo* is selected.

Colours — all accept a hex value and use a colour picker.

Field	Applies to
Template Base Color	Table headings and accent blocks.
Template Text Color	Text printed on the base colour.
General Text Color	Body text.
Company Name Color	Your company name.
Company Address Color	Your company address block.
Customer Name Color	Customer name.
Customer Address Color	Customer address block.
Table Odd Parity Color	Odd table rows.
Table Even Parity Color	Even table rows.

Display options

Field	Effect
Display Company Name in Bold	Bold company name.
Display Customer Name in Bold	Bold customer name.
Display Product Description	Prints the description under each line. On by default.
Display Notes	Prints document notes.
Display Payment Notes	Prints payment notes.
Display Payment Description	Prints payment terms description.
Display Report Barcode	Adds a barcode to the report.

Report font

Field	Effect
Report Font	Font used in the reports.
(reload fonts)	Scans the server for installed fonts and adds them to the list. Reload the page afterwards.

Report Footer

Field	Effect
Report Footer Selection	`Standard` or `Multi Columns Footer`.

Signature

Field	Effect
Display Signature	Adds a signature block at the end of the document.

> **Tip:** set **Standard Template Configuration** first. It overwrites every colour field with that style's preset, so any manual colour tweaks made beforehand will be lost.

7. Customer and vendor defaults

Open any contact (**Contacts**)
and go to the template settings page added by the module, after *Sales & Purchase*.

You can set per contact:

- **Invoice Template**
- **Sale Order Template**
- **Purchase Order Template**
- **RFQ Template**
- **Delivery Note Template**
- **Picking List Template**

Leave a field empty to use the company default. Use this when a particular customer needs branded or simplified paperwork.

8. Per-document override

Each document form gains a template field, so a single document can be printed in a different style without changing any defaults:

Document	Where the field appears
Sales Order / Quotation	next to **Expiration** date
Purchase Order / RFQ	next to **Order Deadline**
Delivery / Picking	next to **Source Document**
Invoice	next to the salesperson field

Leave it empty to inherit from the customer, then the company.

9. Report extra content

This feature appends a fixed PDF to the end of every printed document of a given type — useful for terms and conditions, certificates or legal notices.

Open **Settings → Users & Companies → Companies → Default Report Settings → Report Extra Content**, then create a record:

Field	Notes
Report Type	The document model. One of Invoice (`account.move`), Sales Order (`sale.order`), Transfer (`stock.picking`), Purchase Order (`purchase.order`).
Company	The company the rule applies to.
File name	Name of the uploaded file, including its extension.
Append Extra Content	The file itself.

One record per model per company — this pair is enforced as unique.

Accepted file types. PDFs are appended as-is. Plain text (`.txt`, `.text`) and images (`.jpg`, `.jpeg`, `.png`) are converted to PDF automatically on upload. Any other extension is rejected with a validation error.

10. Printing

Open a document and use the **Print** menu. Each style appears by name — *Bold*, *Classic*, *Corporate*, *Morden*, *Polished*, *Vintage* — because each is registered as a separate Odoo report.

Selecting a style from the Print menu prints that style once. To change the style used by default, set it on the document, the contact, or the company as described above.
